Hands-On-Learning: Design Your Cyber Risk Response Plan in ClickUp

Scenario

You've just completed a cyber risk analysis for your organization. Three high-priority risks have been identified, each with different impact levels and causes. Your task is to apply appropriate response strategies (avoid, transfer, mitigate, or accept) to each risk, document those strategies, and connect them to business objectives using ClickUp.

Instructions

1. Open **ClickUp** (or Miro if you prefer a visual workspace).
2. Create a **new space, folder, or list** where you'll build your Cyber Risk Response Plan.
3. Set up three items (tasks or sticky notes), one for each of the three high-priority risks in the scenario. Include basic details such as:
   - Risk name
   - Likelihood (low/medium/high)
   - Impact on business objectives

4. For each risk, select a response strategy: **avoid, transfer, mitigate, or accept**.
5. Under each task:
   - Clearly state the chosen strategy.
   - Write a short rationale for why you chose it.
   - Assign the task to a team member (or use placeholders like “Risk Owner 1”).
   - Add a due date and priority.

6 In the task description (or by adding custom fields), link each response to a **business objective**, such as uptime, data protection, or compliance.

7 Add tags or status labels (e.g., “Mitigation in Progress,” “Risk Accepted”) to organize and track progress.

This activity gives learners a chance to apply the lesson by:

- Translating risk strategy into structured actions.
- Practicing stakeholder alignment by mapping responses to business goals.
- Gaining hands-on experience using ClickUp for cyber risk governance.

Instructions for Documenting and Sharing The Project for Peer Review

Document the Project

- Use word processing software to create your report.
- Ensure all sections of the project document structure are completed.
- Proofread and edit your report for clarity and accuracy.

Share the Project

Document: Save the report in PDF format.

Upload: Share in the “Peer Review” area of the course shell with a brief description.

Peer Review

Review the projects submitted by your peers.

Provide constructive feedback and comments on their work.
